 statistics of this kind should be interpreted with caution. Results showing a trend should be collected for a minimum of three years before conclusions about school-level performance are drawn.

1. Group 3: between $41 \%$ and $55 \%$ of students in the school from an English speaking background.
2. "Other like schools" are those with a similar ratio of English speaking background students to non-English speaking background students.
3. $\mathrm{n}=$ Number of students
4. Means are expressed as ISA scale scores.
5. S.D. = standard deviation (expressed in ISA scale score points)
6. significance is calculated with a t -test.

 statistics of this kind should be interpreted with caution. Results showing a trend should be collected for a minimum of three years before conclusions about school-level performance are drawn.

1. Group 3: between $41 \%$ and $55 \%$ of students in the school from an English speaking background.
2. "Other like schools" are those with a similar ratio of English speaking background students to non-English speaking background students.
3. $\mathrm{n}=$ Number of students
4. Means are expressed as ISA scale scores.
5. S.D. = standard deviation (expressed in ISA scale score points)
6. significance is calculated with a t -test.
