

In delineating the data by pre-Covid (2018) and post-Covid (2022), it allows for us to see the performance of subgroups. From 2020 to 2021 we were in school for 1 quarter which skews the data for those years because the majority of the data was captured from online teaching. The most accurate way to see the schools performance is pre-Covid (2018) to post-Covid (2022). In looking at the data below around our subgroups from 2018 to 2022, our subgroups have changed based on updates to the assessment. In 2018 we had more subgroups specificity broken down to smaller groups, for example we had Indian, Asian, Black, Hispanic, Pacific Islander, White and Multi-race. In 2022 we decrease the categories for subgroups to American Indian, Black/African American, Other Asian, and White. Within the White sub group it now includes the data for the Hispanic, Pacific Islander, and Multi-race students. The Asian category shifted to Other Asian but the numbers remained the same between Asian and Other Asian students.

In looking at the comparison of the 2018 to 2022 subgroups we had some grade levels grow in subgroups performance and others decrease in sub group performance. We believe that decrease speaks to high turnover of staff from 2018 to 2020 (40% staff turnover).

As we continue on our PLC journey we are going to begin creating a March to Math intervention within the grade bands to begin targeting sub-skills within the essential standards. Through professional learning we will be targeting our 4th, 5th, 7th grade teachers in what interventions in math look and sound like for them to develop their action plans in getting their system up and running.
